Austin, TX – Pinnacle CNG Systems, LLC recently signed a contract with the City of Austin, Texas for the construction and operation of a new 24-hour public access Compressed Natural Gas (“CNG”) fueling station at the City’s Solid Waste Services Facility at 4308 Todd Lane. The new CNG fueling station will include one fast-fill public dispenser along with 26 over-night fueling connections to serve the City of Austin Solid Waste Services’ new fleet of CNG trucks. The over-night fueling is designed to make use of “off peak” electric rates. The public dispenser will accept Visa and MasterCard and will be available for private fleets, city vehicles, school buses and other individual customers. The City of Austin is building the CNG fueling facility in support of the City’s effort to improve air quality in Austin, reduce the dependency upon foreign oil and reduce fuel costs for the City vehicles and the citizens of Austin.

Similar to its other facilities, this newest Pinnacle station will use the patented Hydraulic Intensifier Compressor (“HIC”) system and deliver CNG fuel at a rate exceeding normal gasoline fueling rates. The HIC system is coupled in series with an Ariel compressor to compress 455 Standard Cubic Feet per Minute (“SCFM”) from the local natural gas pipeline. Due to a unique feature of the HIC system, the station will deliver CNG to the public dispenser at rates of up to 1000 SCFM, or more than 7 gasoline gallons equivalent. Pinnacle CNG Systems, LLC has the equivalent of over 30 years of successful combined running time for its HIC technology.

Pinnacle CNG Systems, LLC and its sister company, Trillium USA, LLC, combine to make up one of the largest CNG fuel providers in the United States with an estimated delivery of 30,000,000 Gasoline Gallon Equivalent (“GGE”) in 2006. Pinnacle CNG specializes in advanced technologies for fueling commercial fleets, city fleets and transit operations. Trillium USA is the expert in high-volume transit CNG fueling. Please visit our websites, www.pinnaclecng.com and www.trilliumusa.com, to learn more about our turnkey fueling solutions and our advanced dispensers, dryers and solenoid valves.
